Simple-driven GaN Technology

Common with Si MOSFET

- True enhancement-mode normally off
- Voltage driven - driver charges/discharges $C_{ISS}$
- Supply Gate leakage $I_{GSS}$ only
- Easy slew rate control by $R_G$
- Compatible with Si gate driver chip

Differences

- Much Lower $Q_G$: Lower drive loss; faster switching
- Higher gain and lower $V_{GS}$: +5-6V gate bias to turn on
- Lower $V_{G(th)}$: typ. 1.5V

Versus other enhancement-mode GaN

- More robust gate: -20/+10V max rating
- No DC gate drive current required
- No complicated gate diode / PN junction

GaN HEMTs are simple to drive
650V Drivers

- GaN Systems GaN HEMTs are compatible with most drivers for silicon devices.
- When the driver supply voltage ($V_{DD}$) is higher than +6V (the recommended turn-on $V_{GS}$ for GaN), a negative $V_{GS}$ generating circuit is required to convert the $V_{GS}$ into $+6/-(V_{DD}-6)$ V, refer to page 7.
- $V_{DD}$ is recommended to $\leq 12V$.

Driver Circuit Examples

Single switch driver

- Isolated
  - 0V $V_{GS(Off)}$
  - Single Isolated Driver
  - EZDrive®
  - With voltage divider
  - Digital Isolator + Non-isolated Driver

- Non-Isolated
  - 0V $V_{GS(Off)}$
  - EZDrive®
  - Negative $V_{GS(Off)}$

Half/Full Bridge driver

- Isolated
  - Implement two single switch drivers
  - Bootstrap driver

- Non-Isolated
  - 0V $V_{GS(Off)}$
  - Bootstrap driver + EZDrive®
  - Negative $V_{GS(Off)}$

Paralleling GaN

Driver Circuit for GaN HEMT in Parallel

* When is negative $V_{GS(Off)}$ needed?
• 0V $V_{GS(OFF)}$ for low voltage or low power applications, or where the deadtime loss is critical
• Optional CM Choke for better noise immunity

Example I: Driver with separate outputs for switch ON/OFF (SI8271)

Example II: Driver with single output for switch ON and OFF (ADUM4121)
Single GaN → Isolated → Negative $V_{GS(\text{OFF})}$ → EZDrive®

- Negative $V_{GS}$ voltage is applied by the 47nF capacitor
- Compatible with bootstrap circuit
- Applicable from 1kW ~ 100kW power range
- Optional CM Choke for better noise immunity

Example: SI8271 EZDrive® circuit ($V_{GS}$=+6V/-3V)

For more info about GaN EZDrive®, please refer to GN010: https://gansystems.com/
• Negative $V_{GS}$ voltage is generated by the voltage divider (5.8V Zener diode and 1kOhm resistor)
• Robust and easy to layout
• Applicable for applications from low power to higher power (1kW ~ 100kW)
• Optional CM Choke for better noise immunity

Example: SI8271 driving circuit with voltage divider ($V_{GS}$=+6V/-3V)
• To enable non-isolated driver or buffer with high sink current capability where isolation is required
• For high power applications: e.g. EV motor drive, PV inverter, etc
• Optional CM Choke for better noise immunity

Example: SI8610 (digital isolator) + UCC27511(Non-isolated driver) (V_{GS} = +6V/-6V)
Single GaN $\rightarrow$ Non-Isolated $\rightarrow$ 0V $V_{GS(\text{OFF})}$

- For single-ended applications (Class E, Flyback, Push-pull etc)
- Or to work with a digital isolator for the high-side switch

Example: UCC27511 driving circuit ($V_{GS}$=+6V/0V)
Single GaN → Non-Isolated → Negative $V_{GS(\text{OFF})}$ → EZDrive®

- Negative $V_{GS}$ voltage is applied by the 47nF capacitor
- Compatible with bootstrap circuit
- Optional CM Choke for better noise immunity

Example: UCC27511 driving circuit ($V_{GS}=+6V/-3V$)

For more info about GaN EZDrive®, please refer to GN010: https://gansystems.com/
Half/Full Bridge $\rightarrow$ 0V $V_{GS(0ff)}$ $\rightarrow$ Bootstrap

- For low power applications
- Choose the bootstrap diode with low $C_J$ and fast recovery time

Example: NCP51820 Bootstrap driving circuit ($V_{GS}$=+6V/0V)
• EZDrive® can get a negative voltage on 47nF capacitor, which can be used as turn off voltage
• Turn on/off slew rate is controllable with external resistors to optimize EMI
• Suitable for low power application

Example: NCP51530 Bootstrap driving circuit with EZdrive® (V GS=+6V/-3V)

For more info about GaN EZDrive®, please refer to GN010: https://gansystems.com/
Driver Circuit for GaN HEMT in Parallel

- For HEMTs in parallel, add additional 1ohm gate and source resistors (as highlighted below)

Example: UCC27511 non-isolated driving circuit for single GaN (V_{GS}=+6V/0V)

Example: LM5113 bootstrap driving circuit for half-bridge (V_{GS}=+6V/0V)

For more info about GaN in parallel, please refer to GN004: https://gansystems.com/
Appendix

- Gate driving tips for $V_{GS(OFF)}$
- When is $V_{GS(OFF)}$ needed?
- $V_{GS(OFF)}$ vs. Switching-off Loss
- Trade-off between Switching-off Loss and Deadtime Loss
When is negative $V_{GS(\text{OFF})}$ needed?

- Negative $V_{GS(\text{OFF})}$ can increase noise immunity
- Negative $V_{GS(\text{OFF})}$ can reduce switching-off loss especially under high-current
- Deadtime loss increases as Negative $V_{GS(\text{OFF})}$ increase (more info please refer to page 8, APPNOTE GN001)
- There is a tradeoff between switching-off and deadtime loss for $V_{GS(\text{OFF})}$ selection. -3V $V_{GS(\text{OFF})}$ is recommended to start with for above 0.5kW applications.
Switching-off loss of GS66516B vs. current at $V_{BUS}=400$ V, 25°C, $R_G=1\Omega$

Negative $V_{DROff}$ reduces the switching off energy under high current.
Relation between total loss and deadtime of GS66516B at $I_D=10\text{A}$, 25 $^\circ\text{C}$

ZVS boundary:

$$t_d > \frac{C_{eq} V_{bus}}{i_{Switching}} \quad (1)$$

$$0.5 \cdot L \cdot i_{Smin}^2 > i_{Smin} \cdot V_{SD} \cdot \left(t_d - \frac{C_{eq} V_{DC}}{i_{Smin}}\right) + 0.5 \cdot C_{eq} \cdot V_{DC}^2 \quad (2)$$

- Deadtime loss increases as $V_{GS(OFF)}$ increases
- A too short dead time will result in losing ZVS, while a too long dead time will cause additional loss
Trade-off between Switching-off Loss and Deadtime Loss

Half-bridge overall loss vs. switching current under different negative turn-off gate voltage $V_{D\text{Roff}}$ (a) with deadtime $t_D=40\ nS$, (b) with deadtime $t_D=100\ nS$, (c) with deadtime $t_D=200\ nS$.

- Negative $V_{D\text{Roff}}$ is will make the power stage more efficient under higher power.
- Precise dead time control is the key to higher system efficiency.
